Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to a first fuel cell, classified in class 429, subclass 38.
 - II. Claims 18-24, drawn to a method of making a fuel cell, classified in class 427, subclass 115.
 - III. Claims 25-28, drawn to a second fuel cell, classified in class 429, subclass 39.
2. The inventions are distinct, each from the other because of the following

reasons:

Inventions II and I/III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the products of Groups I and III could be made by a materially different method than that of Group II such as by injection molding. In addition, Group I comprises an electrically conductive member formed of conductive particles in a binder, which feature is not part of the Group III fuel cell.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and

Art Unit: 1745

recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Linda Deschere on December 21, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
